Mission Statement

- The mission of the cancer center is to improve the quality of life and increase survival for people facing cancer in Las Vegas, Nevada (“NV”).
- The Las Vegas, NV cancer center will put cancer patients first and work with healthcare professionals who will do the same.
- A world-class cancer center will move cancer care forward at a rapid pace and enhance cancer drug development.

Our Purpose

- Transform the lives of people with cancer by delivering compassionate care and truly innovative therapies.

Our Core

- Bring together a world class oncology team dedicated to superb cancer care in Las Vegas, NV.

Our Vision

- Build a leading fully integrated cancer center in Las Vegas, NV.

Our Strategy

- Rapidly innovate using our new approaches to the delivery of cancer care to our patients.
- Make available the currently approved therapies that have been shown to have clinical benefit, as well as offering new innovative therapies in clinical trials.

Our Values

Compassion

- From day one, compassion will be woven into the heart and soul of our institution. Compassion for our patients, their families, and our team members.

Sense of Urgency

- We focus on turning great science into practical benefit as quickly as possible.
- We pursue new and better ways to improve the lives of cancer patients. We are driven to provide new treatments for more people every day.

Excellence

- Our commitment to advancing science while providing compassionate care will establish the Las Vegas cancer center as the benchmark for fighting cancer.

Our Values continued..

Integrity

- We choose the right path, not the easy one.
- We promote a culture that requires each of us to do the right thing to ensure our patients safety. We do what's best for our patients and our community, every moment of every day.

Intellectual Curiosity

- Our reputation for scientific excellence will be developed over time and will stem from our determination to aggressively pursue new lines of drug development.

Our Goals

- In 2022, raise \$100 million or more in tax deductible gifts and grants for the Las Vegas cancer center through the support of foundations, philanthropists, business leaders, global corporations, small businesses and other individuals.
- To conduct research at the cancer center with a plan that leads to scientific advances in modern medicine and technology behind the next generation of cancer fighting drugs.
- To be awarded research grants and revenues for patented technology that comes from the Las Vegas cancer center.

Philanthropic Support

- Philanthropic support will make our vision a reality.
- We will plan to be powered by philanthropy and will launch expansion with the firm belief that the Las Vegas cancer center has the potential to change the fate of individuals as we improve medical care overall.
- We will look to achieve the support of professional sports organizations such as the Las Vegas Raiders and Golden Knights and other sports and entertainment companies.

Centurion BioPharma - Our Story

- Centurion BioPharma Corporation is a private oncology company focused on transformational cancer drug development and diagnostics. It was co-founded by Mr. Steven Kriegsman, Executive Chairman, and Dr. Louis Ignarro, Nobel Laureate and Chairman of the Board.
- The Centurion scientific team originally based in Freiburg, Germany, developed the drug Aldoxorubicin.
- Aldoxorubicin is a first-generation technology, which is used with Immunotherapy to treat late-stage pancreatic cancer.
- The combination was given to former Senate Majority Leader Harry M. Reid in his struggle with pancreatic cancer. Nevada Senator Reid had stage 4 pancreatic cancer and was fighting to survive with very low odds. However, as a result of being treated with Aldoxorubicin and Immunotherapy, Senator Reid's life was saved by this combination.

- Centurion BioPharma will have its headquarters in Las Vegas, NV with a satellite office in Los Angeles, CA.
- The company has completed the pre-clinical phase of its ultra high potency LADR (Linker Activated Drug Release) drug candidates and accompanying companion diagnostic, ACDx, designed to significantly improve the treatment of solid tumors.
- We want to be the first to develop the next generation of albumin binding drug conjugates, which we believe could be the Centurion technology LADR's 7, 8, 9, 10 and ACDx diagnostic for solid tumors and potentially hematological tumors.
- Centurion is committed to seeing Las Vegas develop a major cancer center with its help, guidance and support.

Medical Tourism

- In the fastest growing state in America, cancer care should be as good as any other major state.
- Many residents of Nevada who are diagnosed with cancer leave the state to be treated in other locations.
- Our goal of the Las Vegas cancer center is to have residents stay and obtain the best care available. We will attract top oncologists who want to be part of our mission.
- Medical tourism can become significant in Las Vegas as many people want to visit the city and tie it to a possible medical evaluation and treatment.
